MSC for Gen III GM Engines

**NEW
PRODUCT!**

That's right, MSC - Multiple Spark Coil for popular Gen III GM small block! This engine, most notably the LS-1 and LS-6, is fast becoming a favorite performance engine not only in Camaros, the new GTO and Corvettes, but also in muscle cars and street rods.

MSD engineers were able to design an advanced circuit that will operate with the factory electronics of the Gen III engine controls while producing 30% more spark energy. Not only do you get a higher voltage spark, but the coil will deliver multiple sparks!

Notice that coils have two connectors molded into the custom housing. One accepts the factory coil connector, the other is for an upcoming ignition controller. (This controller is still in the development stages but it will allow you to program functions of the ignition. We're planning a lot more for the Gen III fans!)

The new coils mount in place of most factory LS-1 and LS-6 coils. Two style coils are available, the PN 82458 Kit, is the most popular and is currently available. The new PN 82468 Kit, is new will be available this spring.
